

## LEED Certification

### LEED Points Qualifier

As a result of the innovative technology utilized in the IPS energy efficient mechanical systems, we can assist developers in qualifying for a significant portion of available LEED points in the following areas:

### Water Efficiency

**Credit 3.1:** the cooling system will reduce water use by the cooling tower. **1 point**

### Energy & Atmosphere

**Credit 1.1 through Credit 1.5.** This energy credit compares energy use between this building and ASHRAE Std 90.1-1999. IPS would qualify for an energy reduction of 40% to 60% or **6 to 10 points**.

### Indoor Environmental Quality

**Credit 6.2 Controllability of Systems.** IPS provides control for each individual air flow, temperature. Another part of this credit is lighting control. So IPS helps qualify for this **1 point**.

**Credit 7.1 & 7.2 Thermal Comfort.** IPS helps to qualify for these two points. This along with the humidity control like on Resident Lodge (Jackson) IPS would help get these **2 points**.

Total achievable points with **IPS is up to 14 points**
